

Power Maths calculation policy, LOWER KS2

September 2023

Power Maths calculation policy, KS2

The following pages show the *Power Maths* progression in calculation (addition, subtraction, multiplication and division) and how this works in line with the National Curriculum. The consistent use of the CPA (concrete, pictorial, abstract) approach across *Power Maths* helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods.

KEY STAGE 2

In Years 3 and 4, children develop the basis of written methods by building their skills alongside a deep understanding of place value. They should use known addition/subtraction and multiplication/division facts to calculate efficiently and accurately, rather than relying on counting. Children use place value equipment to support their understanding, but not as a substitute for thinking.

Key language: partition, place value, tens, hundreds, thousands, column method, whole, part, equal groups, sharing, grouping, bar model

Addition and subtraction: In Year 3 especially, the column methods are built up gradually. Children will develop their understanding of how each stage of the calculation, including any exchanges, relates to place value. The example calculations chosen to introduce the stages of each method may often be more suited to a mental method. However, the examples and the progression of the steps have been chosen to help children develop their fluency in the process, alongside a deep understanding of the concepts and the numbers involved, so that they can apply these skills accurately and efficiently to later calculations. The class should be encouraged to compare mental and written methods for specific calculations, and children should be encouraged at every stage to make choices about which methods to apply. In Year 4, the steps are shown without such fine detail, although children should continue to build their understanding with a secure basis in place

value. In subtraction, children will need to develop their understanding of exchange as they may need to exchange across one or two columns. By the end of Year 4, children should have developed fluency in column methods alongside a deep understanding, which will allow them to progress confidently in upper Key Stage 2. Multiplication and division: Children build a solid grounding in times-tables, understanding the multiplication and division facts in tandem. As such, they should be as confident knowing that 35 divided by 7 is 5 as knowing that 5 times 7 is 35. Children develop key skills to support multiplication methods: unitising, commutativity, and how to use partitioning effectively. Unitising allows children to use known facts to multiply and divide multiples of 10 and 100 efficiently. Commutativity gives children flexibility in applying known facts to calculations and problem solving. An understanding of partitioning allows children to extend their skills to multiplying and dividing 2- and 3-digit numbers by a single digit.

Children develop column methods to support multiplications in these cases.

For successful division, children will need to make choices about how to partition. For example, to divide 423 by 3, it is effective to partition 423 into 300, 120 and 3, as these can be divided by 3 using known facts.

Children will also need to understand the concept of remainder, in terms of a given calculation and in terms of the context of the problem. **Fractions:** Children develop the key concept of equivalent fractions, and link this with multiplying and dividing the numerators and denominators, as well as exploring the visual concept through fractions of shapes. Children learn how to find a fraction of an amount and develop this with the aid of a bar model and other representations alongside.

in Year 3, children develop an understanding of how to add and subtract fractions with the same denominator and find complements to the whole. This is developed alongside an understanding of fractions as numbers, including fractions greater than 1. In Year 4, children begin to work with fractions greater than 1.

Decimals are introduced, as tenths in Year 3 and then as hundredths in Year 4. Children develop an understanding of decimals in terms of the relationship with fractions, with dividing by 10 and 100, and also with place value.

	Year 3			
	Concrete	Pictorial	Abstract	
Year 3 Addition				
Understanding 100s	Understand the cardinality of 100, and the link with 10 tens. Use cubes to place into groups of 10 tens.	Unitise 100 and count in steps of 100.	Represent steps of 100 on a number line and a number track and count up to 1,000 and back to 0.	
Understanding place value to 1,000	Unitise 100s, 10s and 1s to build 3-digit numbers.	Use equipment to represent numbers to 1,000. 200 240 241 241 Use a place value grid to support the structure of numbers to 1,000. Place value counters are used alongside other equipment. Children should understand how each counter represents a different unitised amount.	Represent the parts of numbers to 1,000 using a part-whole model. 215 = 200 + 10 + 5 Recognise numbers to 1,000 represented on a number line, including those between intervals.	
Adding 100s	Use known facts and unitising to add multiples of 100.	Use known facts and unitising to add multiples of 100.	Use known facts and unitising to add multiples of 100.	

3-digit number + 1s, no exchange or bridging	100 bricks 100 bricks 100 bricks $3 + 2 = 5$ $3 hundreds + 2 hundreds = 5 hundreds$ $300 + 200 = 500$ Use number bonds to add the 1s. 100 bricks 100 br	$3 + 4 = 7$ $3 + 4 = 7$ $3 \text{ hundreds} + 4 \text{ hundreds} = 7 \text{ hundreds}$ $300 + 400 = 700$ Use number bonds to add the 1s. $\frac{H}{1000} = \frac{1}{1000} = \frac{1}{1000}$ $245 + 4$ $5 + 4 = 9$ $245 + 4 = 249$	Represent the addition on a number line. Use a part-whole model to support unitising.
3-digit number + 10s, no exchange	Calculate mentally by forming the number bond for the 10s.	Calculate mentally by forming the number bond for the 10s.	So, $245 + 4 = 249$ Calculate mentally by forming the number bond for the 10s.

	100 100	351 + 30 = ?	753 + 40
	234 + 50 There are 3 tens and 5 tens altogether. $3 + 5 = 8$ In total there are 8 tens. $234 + 50 = 284$	5 tens + 3 tens = 8 tens $351 + 30 = 381$	<i>I know that</i> 5 + 4 = 9 So, 50 + 40 = 90 753 + 40 = 793
3-digit number + 1s with exchange	Understand that when the 1s sum to 10 or more, this requires an exchange of 10 ones for 1 ten.	Exchange 10 ones for 1 ten where needed. Use a place value grid to support the understanding.	Understand how to bridge by partitioning to the 1s to make the next 10. (7)
	Children should explore this using unitised objects or physical apparatus.		5 2 135 140 142
		H T O	135 + 7 = ? 135 + 5 + 2 = 142 Ensure that children understand how to add 1s bridging a 100.
		135 + 7 = 142	198 + 5 = ? 198 + 2 + 3 = 203
3-digit number + 10s, with exchange	Understand the exchange of 10 tens for 1 hundred.	Add by exchanging 10 tens for 1 hundred. 184 + 20 = ?	Understand how the addition relates to counting on in 10s across 100.

		H T O $H T O$ $H T$	$ \begin{array}{c} 1 \\ 184 \\ 190 \\ 184 \\ 190 \\ 200 \\ 184 \\ 184 \\ 204 \\ 204 \\ $
3-digit number + 3-digit number, no exchange	Use place value equipment to make a representation of a calculation. This may or may not be structured in a place value grid. 326 + 541 is represented as: Image: Image:	Represent the place value grid with equipment to model the stages of column addition.	Use a column method to solve efficiently, using known bonds. Children must understand how this relates to place value at every stage of the calculation.
3-digit number + 3-digit number, exchange	Use place value equipment to enact the exchange required.	Model the stages of column addition using place value equipment on a place value grid.	Use column addition, ensuring understanding of place value at every stage of the calculation.

required	There are 13 ones. I will exchange 10 ones for 1 ten.		$\begin{array}{c c} \hline H & T & 0 \\ \hline 1 & 2 & 6 \\ \hline + & 2 & 1 & 7 \\ \hline \hline 1 & 2 & 6 \\ \hline + & 2 & 1 & 7 \\ \hline \hline 1 & 2 & 6 \\ \hline + & 2 & 1 & 7 \\ \hline \hline 1 & 2 & 6 \\ \hline + & 2 & 1 & 7 \\ \hline \hline 1 & 2 & 6 \\ \hline + & 2 & 1 & 7 \\ \hline \hline 3 & 4 & 3 \\ \hline \hline \end{array}$ $\begin{array}{c} \hline 126 + 217 = 343 \\ \hline 126 + 217 = 343 \\ \hline \hline 1 & 2 & 6 \\ \hline 1 & 2 & 6 \\ \hline \hline 1 & 2 & 6 \\ \hline 1 & $
3-digit number + 2-digit number	Use place value equipment to make and combine groups to model addition.	Use a place value grid to organise thinking and adding of 1s, then 10s.	Use the vertical column method to represent the addition. Children must understand how this relates to place value at each stage of the calculation.
3-digit number + 2-digit number, exchange required	Use place value equipment to model addition and understand where exchange is required. Use place value counters to represent 154 + 72. Use this to decide if any exchange is required. There are 5 tens and 7 tens. That is 12 tens	Represent the required exchange on a place value grid using equipment. 275 + 16 = ?	Use a column method with exchange. Children must understand how the method relates to place value at each stage of the calculation.

	so I will exchange.		H T O 2 7 5 + I 6 - 1
			H T O 2 7 5 + 1 6 9 1 1
			H T O 2 7 5 + I 6 2 9 I 1
		275 + 16 = 291	275 + 16 = 291
		<i>Note:</i> In this example, a mental method may be more efficient. The numbers for the example calculation have been chosen to allow children to visualise the concept and see how the method relates to place value. Children should be encouraged at every stage to select methods that are accurate and efficient.	
Representing addition problems, and selecting	Encourage children to use their own drawings and choices of place value equipment to represent problems with one or more steps.	Children understand and create bar models to represent addition problems. 275 + 99 = ?	Use representations to support choices of appropriate methods.
appropriate methods	These representations will help them to select appropriate methods.	374 275 qq 275 + 99 = 374	<i>275</i> 99 <i>I will add 100, then subtract 1 to find the solution.</i>
			128 + 105 + 83 = ?

Year 3			I need to add three numbers. 128 + 105 = 233 233 128 105 83 316 233 83
Subtraction			
Subtracting 100s	Use known facts and unitising to subtract multiples of 100.	Use known facts and unitising to subtract multiples of 100.	Understand the link with counting back in 100s.
	$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$	4 - 2 = 2 400 - 200 = 200	400 - 200 = 200 Use known facts and unitising as efficient and accurate methods. $I know that 7 - 4 = 3. Therefore, I know that 700 - 400 = 300.$
3-digit number − 1s, no exchange	Use number bonds to subtract the 1s. 1 = 3 = 7	Use number bonds to subtract the 1s. $ \begin{array}{c c} H & T & O \\ \hline & & & \\ \hline \hline & & & \\ \hline & & & \\ \hline \hline \hline & & & \\ \hline \hline \hline & & & \\ \hline \hline \hline \hline & & & \\ \hline \hline$	 Understand the link with counting back using a number line. Use known number bonds to calculate mentally. 476 - 4 = ?

	$ \begin{array}{c} \hline 0 \\ 10 \\ 10 \\ 10 \\ 10 \\ 10 \\ 10 \\ 10 \\ $	$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$	$\begin{array}{r} 476 \\ 400 \\ 70 \\ 6 \\ 6 \\ -4 = 2 \\ 476 \\ -4 = 472 \end{array}$
3-digit number – 1s, exchange or bridging required	Understand why an exchange is necessary by exploring why 1 ten must be exchanged. Use place value equipment.	Represent the required exchange on a place value grid. 151 - 7 = ? H T O H T O H T O KXXXX	Calculate mentally by using known bonds. 151 - 7 = ? 151 - 1 - 6 = 144
3-digit number − 10s, no exchange	Subtract the 10s using known bonds. $ \begin{array}{c} \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline \hline$	Subtract the 10s using known bonds. $\begin{array}{c c} H & T & O \\ \hline $	Use known bonds to subtract the 10s mentally. 372 - 50 = ? 70 - 50 = 20 So, 372 - 50 = 322

	8 tens with 1 removed is 7 tens. 381 – 10 = 371		
3-digit number − 10s,	Use equipment to understand the exchange of 1 hundred for 10 tens.	Represent the exchange on a place value grid using equipment.	Understand the link with counting back on a number line.
exchange or bridging required		$210 - 20 = ?$ $\frac{H}{100} + \frac{T}{100} + \frac{1}{100}$ $I need to exchange 1 hundred for 10 tens, to help subtract 2 tens.$ $\frac{H}{1000} + \frac{T}{1000} + \frac{1}{1000}$ $210 - 20 = 190$	Use flexible partitioning to support the calculation. 235 - 60 = ? $235 - 100 + 130 + 5$ $235 - 60 = 100 + 70 + 5$ $= 175$
3-digit number − up to 3-digit number	Use place value equipment to explore the effect of splitting a whole into two parts, and understand the link with taking away.	Represent the calculation on a place value grid.	Use column subtraction to calculate accurately and efficiently.

			H T O q q q - 3 5 2 - 7 - 7 - 1 - 7 - 7 - 7 - 7 - 7 - 7 - 7 - 7
3-digit number – up to 3-digit number, exchange required	Use base 10 equipment to enact the exchange of 1 hundred for 10 tens, and 1 ten for 10 ones.	Model the required exchange on a place value grid. 175 - 38 = ? I need to subtract 8 ones, so I will exchange a ten for 10 ones. H T O H T O H T O H T O STANK XXXXXX	Use column subtraction to work accurately and efficiently.

			Children should also understand how to exchange in calculations where there is a zero in the 10s column.
Representing subtraction problems		Use bar models to represent subtractions. 'Find the difference' is represented as two bars for comparison. Team A 454 Team B 128 ? Bar models can also be used to show that a part must be taken away from the whole.	Children use alternative representations to check calculations and choose efficient methods. Children use inverse operations to check additions and subtractions. The part-whole model supports understanding. <i>I have completed this subtraction.</i> 525 - 270 = 255 <i>I will check using addition.</i> $\boxed{\frac{H T 0}{2 7 0}}$
Year 3 Multiplication			
Understanding equal grouping and repeated addition	Children continue to build understanding of equal groups and the relationship with repeated addition. They recognise both examples and non- examples using objects.	Children recognise that arrays demonstrate commutativity.	Children understand the link between repeated addition and multiplication. $ \begin{array}{r} +3 & +3 & +3 & +3 & +3 & +3 & +3 \\ \hline 0 & 3 & 6 & q & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 21 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 24 \\ \hline 0 & 3 & 12 & 15 & 18 & 24 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 & 24 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 & 24 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 & 24 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 & 24 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 & 24 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 & 24 \\ \hline 0 & 3 & 12 & 12 & 12 & 15 & 18 & 24 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 & 24 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 & 24 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 \\ \hline 0 & 3 & 12 & 12 & 15 & 18 \\ \hline 0 & 3 & 12 & 12$

	Children recognise that arrays can be used to model commutative multiplications.	This is 3 groups of 4. This is 4 groups of 3.	$8 \times 3 = 24$ A bar model may represent multiplications as equal groups. 24 $4 4 4 4 4$ $6 \times 4 = 24$
Using commutativity to support understanding of the times- tables	Understand how to use times-tables facts flexibly.	Understand how times-table facts relate to commutativity. $6 \times 4 = 24$ $4 \times 6 = 24$	Understand how times-table facts relate to commutativity. I need to work out 4 groups of 7. I know that $7 \times 4 = 28$ so, I know that 4 groups of $7 = 28$ and 7 groups of $4 = 28$.

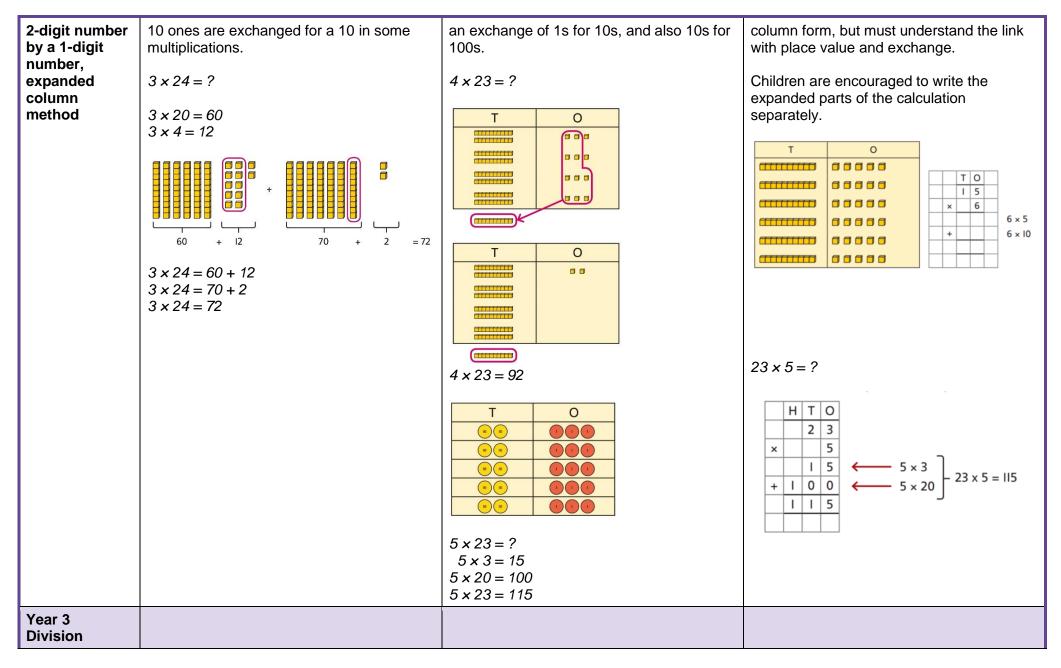

Understanding and using ×3,	There are 6 groups of 4 pens. There are 4 groups of 6 bread rolls. I can use $6 \times 4 = 24$ to work out both totals. Children learn the times-tables as 'groups of' but apply their knowledge of	Children understand how the ×2, ×4 and ×8 tables are related through repeated	Children understand the relationship between related multiplication and division
x2, x4 and x8 tables.	commutativity.	doubling. $3 \times 2 = 6$ $3 \times 4 = 12$ $3 \times 8 = 24$	facts in known times-tables. $ \begin{array}{c} 10 \\ 5 \\ 2 \\ 2 \\ 5 \\ 2 \\ 10 \\ 5 \\ 2 \\ 10 \\ 5 \\ 2 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 2 \\ 5 \\ 10 \\ 10 \\ 10 \\ 2 \\ 10 \\ 10 \\ 10 \\ 10 \\ 10 \\ 10 \\ 10 \\ 10$
Using known facts to multiply 10s, for example 3 × 40	Explore the relationship between known times-tables and multiples of 10 using place value equipment.	Understand how unitising 10s supports multiplying by multiples of 10.	Understand how to use known times-tables to multiply multiples of 10. $\begin{array}{c} +2 \\ +2 \\ 0 \\ 1 \\ 2 \\ 3 \\ +20 \\$
	Make 4 groups of 3 tens.	4 groups of 2 ones is 8 ones. 4 groups of 2 tens is 8 tens.	$4 \times 2 = 8$ $4 \times 20 = 80$

	What is the same? What is different?	$4 \times 2 = 8$ $4 \times 20 = 80$	
Multiplying a 2-digit number by a 1-digit	Understand how to link partitioning a 2-digit number with multiplying.	Use place value to support how partitioning is linked with multiplying by a 2-digit number.	Use addition to complete multiplications of 2-digit numbers by a 1-digit number.
number	Each person has 23 flowers. Each person has 2 tens and 3 ones.	3 × 24 = ?	$4 \times 13 = ?$ $4 \times 3 = 12$ $4 \times 10 = 40$
		T O Image: Second sec	12 + 40 = 52 4 × 13 = 52
	There are 3 groups of 2 tens.	3 × 4 = 12	
	There are 3 groups of 3 ones. Use place value equipment to model the multiplication context. T O Image: Context of the multiplication context of the multiplic	T O	
	There are 3 groups of 3 ones.	3 × 24 = 72	
	There are 3 groups of 2 tens.		
Multiplying a	Use place value equipment to model how	Understand that multiplications may require	Children may write calculations in expande

Using times- tables knowledge to divide	Use knowledge of known times-tables to calculate divisions. 24 divided into groups of 8. There are 3 groups of 8.	Use knowledge of known times-tables to calculate divisions.	Use knowledge of known times-tables to calculate divisions. I need to work out 30 shared between 5. I know that $6 \times 5 = 30$ so I know that $30 \div 5 = 6$. A bar model may represent the relationship between sharing and grouping. 24 4 4 4 4 4 4 4 4 4
Understanding remainders	Use equipment to understand that a remainder occurs when a set of objects cannot be divided equally any further.	Use images to explain remainders.	Understand that the remainder is what cannot be shared equally from a set.

	There are 13 sticks in total. There are 3 groups of 4, with 1 remainder.	$22 \div 5 = 4 \text{ remainder } 2$	$22 \div 5 = ?$ $3 \times 5 = 15$ $4 \times 5 = 20$ $5 \times 5 = 25 \dots$ this is larger than 22 So, $22 \div 5 = 4$ remainder 2
Using known facts to divide multiples of 10	Use place value equipment to understand how to divide by unitising. <i>Make 6 ones divided by 3.</i> Now make 6 tens divided by 3. What is the same? What is different?	Divide multiples of 10 by unitising.	Divide multiples of 10 by a single digit using known times-tables. $180 \div 3 = ?$ 180 is 18 tens. 18 divided by 3 is 6. 18 tens divided by 3 is 6 tens. $18 \div 3 = 6$ $180 \div 3 = 60$
2-digit number divided by 1-digit number, no remainders	Children explore dividing 2-digit numbers by using place value equipment.	Children explore which partitions support particular divisions.	Children partition a number into 10s and 1s to divide where appropriate. $60 \div 2 = 30$ $8 \div 2 = 4$ $68 \div 2 = 34$ Children partition flexibly to divide where appropriate.

2-digit number divided by 1-digit number, with remainders	Image: Second system Image: Second system	$42 = 30 + 12$ $42 = 30 + 12$ $42 = 30 + 12$ $42 = 30 + 12$ $42 = 3 = 14$ Use place value equipment to understand the concept of remainder in division. $29 \neq 2 = ?$ $30 = 12$ $29 \neq 2 = 14 \text{ remainder 1}$	$42 \div 3 = ?$ $42 = 40 + 2$ I need to partition 42 differently to divide by 3. $42 = 30 + 12$ $30 \div 3 = 10$ $12 \div 3 = 4$ $10 + 4 = 14$ $42 \div 3 = 14$ Partition to divide, understanding the remainder in context. $67 \text{ children try to make 5 equal lines.}$ $67 = 50 + 17$ $50 \div 5 = 10$ $17 \div 5 = 3 \text{ remainder 2}$ $67 \div 5 = 13 \text{ remainder 2}$ There are 13 children in each line and 2 children left out.
		Year 4	
	Concrete	Pictorial	Abstract
Year 4 Addition			
Understanding numbers to	Use place value equipment to understand the place value of 4-digit numbers.	Represent numbers using place value counters once children understand the	Understand partitioning of 4-digit numbers, including numbers with digits of 0.

10,000		relationship between 1,000s and 100s.	
		2,000 + 500 + 40 + 2 = 2,542	5,000 60 8
	<i>4 thousands equal 4,000.</i> <i>1 thousand is 10 hundreds.</i>		5,000 + 60 + 8 = 5,068 Understand and read 4-digit numbers on a number line.
Choosing mental methods where appropriate	Use unitising and known facts to support mental calculations. <i>Make 1,405 from place value equipment.</i> <i>Add 2,000.</i> <i>Now add the 1,000s.</i> <i>1 thousand + 2 thousands = 3 thousands</i>	Use unitising and known facts to support mental calculations. $ \begin{array}{c c} \hline Th & H & T & O \\ \hline \bullet \bullet \bullet \bullet & \bullet $	Use unitising and known facts to support mental calculations. 4,256 + 300 = ? 2 + 3 = 5 $200 + 300 = 5004,256 + 300 = 4,556$
Column addition	 1,405 + 2,000 = 3,405 Use place value equipment on a place value grid to organise thinking. Ensure that children understand how the columns relate to place value and what to do if the numbers are not all 4-digit numbers. Use equipment to show 1,905 + 775. 	So, 4,256 + 300 = 4,556 Use place value equipment to model required exchanges.	Use a column method to add, including exchanges.

	1	T	,
Representing additions and checking strategies	Th H T O Image: Constraint of the second row? Why is the Thousands box empty? Which columns will total 10 or more?	Th H T 0 Include examples that exchange in more than one column. 0 0 Bar models may be used to represent additions in problem contexts, and to justify mental methods where appropriate. 1.225 1.225 749 574	The H T OII<
		I chose to work out 574 + 800, then subtract 1.	1,000 + 6,000 = 7,000.

Year 4 Subtraction		6,000 2,999 3,001 This is equivalent to 3,000 + 3,000.	
Choosing mental methods where appropriate	Use place value equipment to justify mental methods.	Use place value grids to support mental methods where appropriate. Th H T O Th H T O Th H T O Th O Th H T O Th O	Use knowledge of place value and unitising to subtract mentally where appropriate. 3,501 – 2,000 3 thousands – 2 thousands = 1 thousand 3,501 – 2,000 = 1,501
Column subtraction	Understand why exchange of a 1,000 for 100s, a 100 for 10s, or a 10 for 1s may be necessary. → → → → → → → → → → → → → → → → → → →	Represent place value equipment on a place value grid to subtract, including exchanges where needed.	Use column subtraction, with understanding of the place value of any exchange required.

		$\begin{array}{c c c c c c c c c c c c c c c c c c c $	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
Column subtraction with exchange across more than one column	Understand why two exchanges may be necessary. 2,502 - 243 = ? I need to exchange a 10 for some 1s, but there are not any 10s here.	Make exchanges across more than one column where there is a zero as a place holder. 2,502 - 243 = ? The Here is a zero as a place defined and the series of the series o	Make exchanges across more than one column where there is a zero as a place holder. 2,502 - 243 = ?

		Th H T O 2 4% 0 2 - 2 4 3 - 2 4 3 - 2 4 3 - 2 4 3 - 2 4 3 - 2 4% $^{\prime}$ % - 2 4% $^{\prime}$ % - 2 4 3 - 2 4 3 - 2 4 3 - 2 4 3 - 2 4 3 2 2 5 9
Representing subtractions and checking strategies	Use bar models to represent subtractions where a part needs to be calculated. Total 5,762 ? 2,899 Yes votes No votes <i>I can work out the total number of Yes votes</i> <i>using 5,762 – 2,899.</i> Bar models can also represent 'find the difference' as a subtraction problem. Danny 899 ? Luis 1,005	Use inverse operations to check subtractions. I calculated 1,225 – 799 = 574. I will check by adding the parts. 1,225 799 574 1,225 799 574 1,225 799 574 Th H T O 799 79 797 79 707 79 707 79 707 79 707 79 707 79 707 79 707 79 707 70 707 70
Year 4 Multiplication		

Multiplying by multiples of 10 and 100	Use unitising and place value equipment to understand how to multiply by multiples of 1, 10 and 100. 3 groups of 4 ones is 12 ones. 3 groups of 4 tens is 12 tens. 3 groups of 4 hundreds is 12 hundreds.	Use unitising and place value equipment to understand how to multiply by multiples of 1, 10 and 100. $3 \times 4 = 12$ $3 \times 40 = 120$ $3 \times 400 = 1,200$	Use known facts and understanding of place value and commutativity to multiply mentally. $4 \times 7 = 28$ $4 \times 70 = 280$ $40 \times 7 = 280$ $4 \times 700 = 2,800$ $400 \times 7 = 2,800$
Understanding times-tables up to 12 × 12	Understand the special cases of multiplying by 1 and 0. $5 \times 1 = 5$ $5 \times 0 = 0$	Represent the relationship between the x9 table and the x10 table. Represent the x11 table and x12 tables in relation to the x10 table. $2 \times 11 = 20 + 2$ $3 \times 11 = 30 + 3$ $4 \times 12 = 40 + 8$	Understand how times-tables relate to counting patterns. Understand links between the x3 table, x6 table and x9 table 5×6 is double 5×3 x5 table and x6 table <i>I know that</i> $7 \times 5 = 35$ so <i>I know that</i> $7 \times 6 = 35 + 7$. x5 table and x7 table $3 \times 7 = 3 \times 5 + 3 \times 2$ 3×5 3×5 3×2 3×5 3×7 x9 table and x10 table $6 \times 10 = 60$ $6 \times 9 = 60 - 6$
Understanding and using partitioning in multiplication	Make multiplications by partitioning. 4 × 12 is 4 groups of 10 and 4 groups of 2.	Understand how multiplication and partitioning are related through addition.	Use partitioning to multiply 2-digit numbers by a single digit. $18 \times 6 = ?$

	$4 \times 12 = 40 + 8$	$ \begin{array}{c} 0 \\ 0 \\ 0 \\ $	$18 \times 6 = 10 \times 6 + 8 \times 6$ = 60 = 108 8×6 = 108 $18 \times 6 = 10 \times 6 + 8 \times 6$ = $60 + 48$ = 108 $18 \times 6 = 10 \times 6 + 8 \times 6$ = $60 + 48$ = 108
Column multiplication for 2- and 3-digit numbers multiplied by a single digit	Use place value equipment to make multiplications. Make 4×136 using equipment. Make 4×136 using equipment. Make 4×136 using equipment. There are 4×100 and 100 and	Use place value equipment alongside a column method for multiplication of up to 3-digit numbers by a single digit.	Use the formal column method for up to 3-digit numbers multiplied by a single digit.

Multiplying more than two numbers	Represent situations by multiplying three numbers together.	Understand that commutativity can be used to multiply in different orders. 000000000000000000000000000000000000	Use knowledge of factors to simplify some multiplications. $24 \times 5 = 12 \times 2 \times 5$ $12 \times 2 \times 5 =$ $12 \times 10 = 120$ So, $24 \times 5 = 120$
Year 4 Division			
Understanding the relationship between multiplication and division, including times-tables	Use objects to explore families of multiplication and division facts.	Represent divisions using an array.	Understand families of related multiplication and division facts. <i>I know that</i> $5 \times 7 = 35$ so <i>I know all these facts:</i> $5 \times 7 = 35$ $7 \times 5 = 35$ $35 = 5 \times 7$ $35 = 7 \times 5$ $35 \div 5 = 7$ $35 \div 7 = 5$ $7 = 35 \div 5$ $5 = 35 \div 7$
Dividing	Use place value equipment to understand	Represent divisions using place value	Use known facts to divide 10s and 100s by

	hourte une unitione te divide	a quin mant	o cinalo divit
multiples of 10 and 100 by a	how to use unitising to divide.	equipment.	a single digit.
single digit		9 ÷ 3 =	15 ÷ 3 = 5
			150 ÷ 3 = 50
		90 ÷ 3 = 10 10 10 10 10 10	1500 ÷ 3 = 500
		900 ÷ 3 =	
	8 ones divided into 2 equal groups 4 ones in each group	9 ÷ 3 = 3	
	8 tens divided into 2 equal groups 4 tens in each group	9 tens divided by 3 is 3 tens. 9 hundreds divided by 3 is 3 hundreds.	
	8 hundreds divided into 2 equal groups 4 hundreds in each group		
Divide by sharing	Share using place value equipment	Share by exchanging	Share using known facts and partitioning where appropriate
Sharing	36 shared equally between 3 groups	56 shared equally between 4 groups	
		First share the 10s	142 ÷ 2 = ?
		First share the 10s.	$146 \\ 6 \\ 100 \div 2 = 40 \div 2 = 6 \div 2 = 1$
	36 ÷ 3 = 12	Exchange 1 ten for 1s, then share all the 1s.	$100 \div 2 = 50$ $40 \div 2 = 20$ $6 \div 2 = 3$ 50 + 20 + 3 = 73 $142 \div 2 = 73$

		56 ÷ 4 = 14	
Understanding remainders	Use place value equipment to find remainders. 85 shared into 4 equal groups There are 24, and 1 that cannot be shared.	Represent the remainder as the part that cannot be shared equally. 72 \div 5 = 14 remainder 2	Understand how partitioning can reveal remainders of divisions. $ \begin{array}{r} $
